WEBSITE PROJECT PROPOSAL

Nourish and Bloom Wellness Cafe

1. Organization Overview

1.1 Name

Nourish and Bloom Wellness Café (Pty) Ltd is a fictional independent wellness café trading in Sandton Central, Johannesburg.

1.2 Brief history

Nourish and Bloom opened in October 2021 as a four-table coffee counter on the second floor of an office block in Maude Street. The unused rooftop was planted with herb boxes so the kitchen could cut its own basil, mint, and sorrel. Guests asked to sit upstairs, and by 2023 the terrace had become the café itself, seating sixty people. A second, smaller takeaway counter opened in Sandown in 2025. The business employs fourteen people and remains managed.

1.3 Mission

To serve fresh, energizing food and drink grown as close to the table as a city allows, in a space that feels warm, relaxed and genuinely welcoming to everyone who works in or visits Sandton.

1.4 Vision

To become Sandton's most loved everyday garden and to have three rooftop cafés by 2030, each growing its own produce and training staff drawn from the surrounding community.

1.5 Target audience

- Professionals aged 25-45 working in the Sandton CBD.
- Health-conscious residents of Sandown, Morningside and Bryanston.
- Small corporate teams that are seeking a relaxed venue for breakfast meetings and workshops.
- Business travelers staying in nearby hotels who want a lighter alternative to a hotel buffet.

2. Website Goals and Objectives

The website must convert online interest into visits and paid bookings. The specific goals are:

- Present the café's identity, story and values clearly to first-time visitors.
- Publish an accurate, current menu with prices so guests can decide before arriving.
- Generate catering, terrace-hire and workshop enquiries through an online form.
- Make both Sandton locations, trading hours and directions easy to find on a mobile phone.

2.1 Key performance indicators

Indicator	Target (within 6 months)
Unique monthly visitors	1 500
Enquiry form submissions	25 per month
Average session duration	Above 90 seconds
Home page bounce rate	Below 55 per cent
Mobile traffic served without layout errors	100 per cent
Google Business Profile clicks to directions	300 per month

4. Proposed Website Features and Functionality

Page	Purpose and functionality
index.html — Home	Hero image of the rooftop terrace, short introduction, three highlights, calls to action to the menu and contact pages.
about.html — About Us	History, mission, vision, values, team profiles and target audience.
menu.html — Menu	Cold press, bowls and coffee grouped by category with descriptions, dietary tags and rand prices.
enquiry.html — Enquiry	Form capturing name, email, telephone, enquiry type, guest count, date, dietary requirements and a message.
contact.html — Contact	Two locations with addresses and hours, an embedded map and a general contact form.

Supporting functionality: a sticky navigation menu present on all five pages, a mobile navigation toggle, semantic HTML for accessibility, descriptive alternative text on every image, and responsive layouts down to 360 pixels wide.

5. Design and User Experience

The design combines the feeling of a garden above the city with the energy of Sandton: botanical, editorial and welcoming rather than clinical or spa-like. Layouts are warm, generously spaced and photograph led.

5.1 Color scheme

Colour	Hex	Application
Deep garden green	#1F3D2B	Header, footer, page banners, headings
Sun-washed oat	#F5EEDF	Page background, cards, form fields
Marigold gold	#E8A33D	Buttons, section rules, card top borders
Muted coral	#E27D60	Labels, dietary tags, prices, form legends

5.2 Typography

- Headings: a serif display face at 3rem (h1), 2.1rem (h2) and 1.3rem (h3) for an editorial voice.
- Body: a clean sans-serif at 17px with a 1.7-line height for comfortable reading.
- Labels: 0.72rem uppercase with 0.18em letter spacing in muted coral.

5.3 Layout and design approach

A single 1120-pixel content column with 24-pixel gutters. Sections alternate between the oat background and a near-white surface to create rhythm. Content is arranged in two and three columns.

5.4 User experience considerations

- The same five-item navigation appears on every page, with the current page marked in coral.
- Buttons use high-contrast marigold on deep green and change to coral on hover and focus.
- Form fields have visible labels and a marigold focus outline for keyboard users.
- Colour contrast meets WCAG 2.2 AA for body text and interface elements.

5.5 Low-fidelity wireframes

Home: Full-width hero image with an overlaid copy block, followed by a two-column introduction (text left, interior photograph right), a three-card highlights row, and a full-width call-to-action card.

Inner pages: Deep green banner containing a label, heading and one line of copy, followed by alternating content sections. The menu page uses a two-column price list; the enquiry and contact pages place explanatory copy on the left and the form on the right.

Footer (all pages): three columns address, navigation links and trading hours above a copyright line.

6. Technical Requirements

- Languages: HTML5 and CSS3 in Part 1 and Part 2; vanilla JavaScript for the navigation toggle and form feedback in Part 3.
- Editor and version control: Visual Studio Code with Git and a private GitHub repository.
- Domain: Nourish and Bloom.co.za, registered through a South African registrar at roughly R120 per year.
- Hosting: A shared South African hosting package (Afrihost or similar) with SSL, or free static hosting on GitHub Pages during development.
- Third-party services: An OpenStreetMap embed for the contact page and Google Analytics 4 for KPI tracking.
- Testing: Chrome, Edge, Firefox and Safari on desktop and mobile, plus W3C HTML and CSS validation.

7. Timeline and Milestones

Milestone	Deliverable	Target
Proposal	Website project proposal submitted for approval	Week 1
Approval	Lecturer approves the target organization	Week 2
Research	Content research, copywriting and image sourcing	Week 3
Planning	Sitemap, wireframes and folder structure	Week 3
Part 1	Five HTML pages, navigation, README and repository	Week 4
Part 2	Full CSS styling, responsive layout, refinements	Week 5-Week 10
Part 3	JavaScript, testing, validation, hosting and handover	Week 11-15

8. Budget

Item	Estimated cost (ZAR)
Domain registration (Nourish and Bloom.co.za, per year)	R 120
Shared hosting with SSL (R89 per month, 12 months)	R 1 068
Professional food and interior photography (half day)	R 3 500
Copywriting and content editing	R 2 000
Development (student project, costed at 40 hours × R150)	R 6 000
Annual maintenance, backups and content updates	R 2 400
Total first-year cost	R 15 088

Proposal 2

1. Organization Overview

1.1 Name

Bean & Batch Coffee Roastery (Pty) Ltd is a fictional independent specialty coffee roastery and artisan bakery trading from two branches: 1147 Burnett Street, Hatfield, Pretoria and 62 Juta Street, Braamfontein, Johannesburg.

1.2 Brief history

Bean & Batch began in March 2020 as a single 5 kg drum roaster in a converted garage in Hatfield, supplying roasted beans to student residences and two neighboring restaurants during the trading restrictions of that year. Demand for the weekend sourdough that the founders baked alongside the roast grew faster than the coffee itself, and in 2022 the business took a shopfront on Burnett Street combining a roastery, a bakery counter and thirty seats. A second branch opened in Braamfontein in 2024 to serve the Wits and Johannesburg CBD creative district, roasting on site every Tuesday and Friday. The business now employs eighteen people, roasts approximately 400 kg of green coffee per month and remains owner managed.

1.3 Mission

To roast coffee in small, traceable batches and bake bread the slow way every morning, so that every cup and every loaf sold in Pretoria and Johannesburg carries a fair price back to the farmer and an honest product forward to the customer.

1.4 Vision

To be Gauteng's most trusted neighborhood roastery and bakehouse, operating four branches and a dedicated training roastery by 2030, with at least half of all staff recruited and skilled from the communities surrounding each branch.

1.5 Target audience

- Students and academic staff.
- Young professionals aged 22-40 working in Hatfield's embassy precinct and the Braamfontein creative and media district.
- Residents of Hatfield, Brooklyn, Menlo Park, Braamfontein and Parktown buying retail beans and daily bread.
- Small offices, agencies and co-working spaces ordering breakfast platters, filter-coffee flasks and meeting catering.

- Independent restaurants and guesthouses buying wholesale roasted coffee on a standing weekly order.

2. Website Goals and Objectives

- The current business relies almost entirely on foot traffic and an Instagram page. The website must turn online interest into shop visits, catering enquiries and wholesale accounts. The specific goals are:
- Present the roastery's story, roasting philosophy and values clearly to a first-time visitor within one screen of the home page.
- Publish an accurate coffee and bakery price list, updated monthly, so customers can decide before they arrive.
- Generate office catering, celebration-cake and wholesale bean enquiries through a single structured online form.
- Make both branches, their trading hours and directions findable in under three taps on a mobile phone.
- Establish a consistent, accessible brand presence that can later carry an online store in Part 3 of the project.

2.1 Key performance indicators

Indicator	Target (within 6 months)
Unique monthly visitors	1 800
Enquiry form submissions	30 per month
Wholesale enquiries	6 per month
Average session duration	Above 90 seconds
Home page bounce rate	Below 55 per cent
Mobile traffic served without layout errors	100 per cent
Google Business Profile clicks to directions	350 per month

4. Proposed Website features and functionality

Page	Purpose and functionality
index.html- Home	An image of the roaster and bakery counter, a short introduction, three highlight cards (roasted here, baked daily, catering) and calls to action to the products and contact pages.

about.html- About Us	History from the garage roaster to two branches, mission, vision, values, sourcing note and team profiles.
services.html - Products & Services	Coffee bar and bakery price lists are grouped by category with descriptions and rand prices, plus office catering packages, celebration cakes and wholesale bean supply.
enquiry.html -Enquiry	From capturing name, email, telephone, preferred branch, enquiry type, guest or unit count, required date, dietary notes and a message.
contact.html- Contact	Both branches with addresses, telephone numbers and trading hours, an embedded map and a general contact form.

Supporting functionality: a sticky navigation bar present on all five pages, a mobile navigation toggle, semantic HTML5 landmarks (header, navigation, main, section, footer) for accessibility, descriptive alternative text on every image, consistent footer with both branch addresses, and responsive layouts down to 360 pixels wide.

5. Design and User Experience

The design should feel like the shop itself: warm, hand-made and unhurried, closer to a paper coffee bag and a bakery chalkboard than to a corporate franchise. Layouts are generously spaced, photograph-led and typographically confident.

5.1 Colour scheme

Colour	Hex	Application
Espresso brown	#3B2415	Header, footer, page banners, headings
Warm cream	#F7F1E6	Page background, cards, form fields
Burnt orange	#C1651F	Buttons, section rules, card top borders
Toasted caramel	#A8763E	Labels, price tags, form legends, hover states
Charcoal ink	#2A2320	Body copy and table text

5.2 Typography

- Headings: Fraunces, a warm serif display face, at 3rem (h1), 2.1rem (h2) and 1.3rem (h3) for an editorial, handset voice.
- Body: Karla, a clean humanist sans-serif, at 17px with a 1.7-line height for comfortable reading on both desktop and mobile.
- Labels and price tags: 0.72rem uppercase with 0.18-em letter spacing in toasted caramel.

5.3 Layout and design approach

A single 1120-pixel content column with 24-pixel gutters, centered on all screens above 1180 pixels. Sections alternate between the cream background and a near-white card surface to create vertical rhythm. Content is arranged in two and three column grids that collapse to one column

below 760 pixels. Cards use a 14-pixel corner radius and a soft shadow, so the page reads as a set of physical, tactile blocks.

5.4 User experience considerations

- The same five-item navigation appears on every page, with the current page marked in burnt orange.
- Buttons use high-contrast orange on cream and shift to espresso brown on hover and keyboard focus.
- Form fields have visible labels, generous 44-pixel touch targets and a burnt-orange focus outline for keyboard users.
- Prices are shown in plain rands with no hidden charges, addressing the most common customer question.
- Colour contrast meets WCAG 2.2 AA for body text and interface elements; no information is conveyed by colour alone.

5.5 Low-fidelity wireframes

Home:

Full-width hero photograph of the roaster with an overlaid copy block and two buttons, followed by a two-column introduction (text left, bakery counter photograph right), a four-card highlights row, and a full-width call-to-action card inviting office orders.

Inner pages:

An espresso-brown banner containing a small label, a heading and one line of copy, followed by alternating content sections. The products page uses two-column price tables per category; the enquiry and contact pages place explanatory copy on the left and the form on the right, stacking on mobile.

Footer (all pages):

Three columns: the two branch addresses, navigation links, and trading hours — above a copyright and student-attribution line.

6. Technical Requirements

- Languages: HTML5 and CSS in Part 2; vanilla JavaScript for the navigation toggle, form validation and feedback in Part 3.
- Editor and version control: Visual Studio Code with Git and a private GitHub repository, committing at each milestone.

- File structure: index.html, about.html, services.html, enquiry.html and contact.html at the root, with CSS/and images/ subfolders.
- Domain: beanandbatch.co.za, registered through a South African registrar at roughly R120 per year.
- Hosting: a shared South African hosting package (Afrihost or similar) with SSL, or free static hosting on GitHub Pages during development.
- Third-party services: an OpenStreetMap embed for the contact page and Google Analytics 4 for KPI tracking.
- Performance: images compressed and served at no more than 200 KB each, with lazy loading below the fold.
- Testing: Chrome, Edge, Firefox and Safari on desktop and mobile, plus W3C HTML and CSS validation before each submission.

7. Timeline and Milestones

Milestone	Deliverable	Target
Proposal	Website project proposal submitted for approval	Week 1
Approval	Lecturer approves the target organization	Week 2
Research	Content research, copywriting and image sourcing	Week 3
Planning	Sitemap, wireframes and folder structure	Week 3
Part 1	Five HTML pages, navigation, README and repository	Week 4
Part 2	Full CSS styling, responsive layout, refinements	Week 5 - Week 10
Part 3	JavaScript, testing, validation, hosting and handover	Week 11 - Week 15

8. Budget

Item	Estimated cost (ZAR)
Domain registration (beanandbatch.co.za, per year)	R 120
Shared hosting with SSL (R89 per month, 12 months)	R 1 068
Professional coffee, bakery and interior photography (half day)	R 3 500
Copywriting and content editing	R 2 000
Logo refinement and brand assets	R 1 200

Development (student project, costed at 40 hours × R150)	R 6 000
Annual maintenance, backups and content updates	R 2 400
Total first-year cost	R 16 288
